Education

University Of New South Wales — Kensington, NSW
Bachelor of Science (Computer Science) — *Jan. 2022 – Dec. 2025*

- WAM: 78.87 (Distinction)

Experience

Singtel Group — Apr. 2024 – Present
Optus Sales Associate

- Developed deep product knowledge across Optus's mobile, broadband, and device portfolio, consistently translating technical specifications into customer-tailored solutions to exceed monthly KPIs by 15%.
- Resolved 70-80% of complex billing and technical inquiries on first contact, applying structured problem-solving in a high-volume, fast-paced environment.
- Recognised as a trusted escalation point for technical and service issues, exceeding store NPS targets by 35% while bridging communication between technical and non-technical stakeholders.

Elevate Tuition — Jan. 2022 – Dec. 2024
Team Leader

- Led and mentored a team of tutors, implementing structured performance frameworks that increased session attendance consistency by 50% and drove measurable improvements in student outcomes and satisfaction.
- Designed and optimised scheduling and operational workflows, improving team efficiency and reducing coordination overhead across multiple concurrent sessions.
- Served as the primary point of contact for academic and operational issues, developing strong stakeholder management and decision-making skills under pressure.

Projects

Stronger Brains | *JavaScript, SQL, React, BrainHQ API*

- Identified a data integrity issue where BrainHQ API responses didn't match documented format, and built a validation and transformation layer to normalise the structure, preventing downstream UI errors in a live team codebase.
- Collaborated in a 6-person Agile team over 5 development sprints, using Jira-managed workflows for sprint planning and task tracking to contribute features to a data-integrated cognitive engagement application built on the BrainHQ API.
- Built 15 reusable React components for interactive dashboards, leading front-end feature implementation to translate structured BrainHQ performance data into accessible, user-friendly visualisations that improved user engagement and retention.

Job Application Tracker | *React 19, TypeScript, Tauri v2, Supabase, PostgreSQL*

- Built validation logic capable of processing 500+ imported CSV records, preventing malformed application data from entering a relational PostgreSQL database.
- Designed an analytics dashboard tracking 8 recruitment KPIs across 50+ job applications, providing insights into response rates, interview conversion, and follow-up performance.
- Architected a secure multi-user system with 7 relational database tables, Supabase Auth and Row-Level Security, deployed as both a React web application and native desktop app using Tauri v2.

Budget Tracker | *Next.js, TypeScript, PostgreSQL, OpenAI API*

- Evaluated AI-generated spending summaries using 750+ sample transactions, refining prompts to consistently ground insights in transaction data.
- Designed a normalised PostgreSQL schema spanning 6 relational tables and REST APIs supporting secure CRUD operations for financial data.
- Built a responsive Next.js interface comprising 12 reusable TypeScript components for budgeting, analytics, and transaction management.

Task Management App | *Rust, Tauri, TypeScript, React, SQLite*

- Built a responsive React and TypeScript front-end with dynamic dashboards and real-time state management.
- Implemented 8 Rust backend commands for secure business logic, database access, and filesystem operations.
- Implemented persistent SQLite storage enabling efficient CRUD operations and offline-first data management.

Technical Skills

Languages: Java, Python, C/C++, SQL (Postgres), JavaScript/TypeScript, HTML/CSS, Rust
Frameworks & Tools: React, Next.js, Tauri v2, Node.js, Supabase, REST APIs, Git/GitHub
Data & Cloud: PostgreSQL, SQLite, Supabase (Auth, Edge Functions, RLS), Claude API, OpenAI API
